This data capture worksheet is designed to allow you to keep a record of auto expense on a monthly basis to make it easy for your accountant to allocate a write-off percentage at year end for tax reporting purposes. The system is set to allocate 75% of expenses to your business with 25% being considered as personal use driving. However, this report will give you and your accountant the information needed to make other expense allocation if needed. Plus in the event of a TAX AUDIT this will be a time saver report that can be printed by month and provided to the auditor.
